Re: **PRODUCT DISCONTINUATION NOTICE**

Dear Analog Tape and DL700 Holter Customer:

This letter is to inform you of the manufacturing discontinuation of the original Analog Tape Holter units, the SYS350 PCI Playback Systems and the DL700 Holter monitor. These changes are necessitated by a combination of factors. They include the continuing shortage and obsolescence of parts resulting in higher costs and very low overall demand.

This discontinuation specifically involves our DL250 chassis, DL450 (DM400) 5 and 7 wire Holter Kits, internal and external SYS350 PCI Playback Systems, and all DL700 models. The earlier generation SYS350 ISA System was discontinued with the introduction of the PCI version.

We want to give you this information so you can review your needs and make final lifetime purchases. Please contact us by October 31, 2007 to take advantage of the existing supply and to make final purchases. All new device purchases will carry the original one year warranty.

Advanced Biosensor will continue to support these end-of-life products for as long as possible. This support will include purchase of spare parts as long as supply is available and our factory repair service.

Many of you may have already made the choice to transition to the digital format by purchasing one of our state-of-the-art Digital Holters. If you are interested in upgrading your DM400 or DL700 monitors, please call us to take advantage of our "**DM/DL Trade-In Program**" at **1-800-443-3816**.

Sincerely,

Jeffrey C. Glover
Operations Manager
Advanced Biosensor, Inc.
